

Software Winners

Powerfully Connected

BY ZACH MINERS
February 2008

The age of the Internet and Web 2.0 is changing the way students think, speak and gather information. The trends involved are also changing how teachers and administrators access and implement computer software programs. While many of this year's top software products act as stand-alone packages, quite a few are more or entirely Web-based, blurring the line between software that you "put on" your computer and software that is "wired in" and integrated to a network of other users.

Regardless of their various forms of interconnectivity, what really brings the top software products of 2007-08 together is that, if used properly and to their potential, they can make your job more productive.

AMERICAN EDUCATION CORPORATION

A+nyWhere LEARNING SYSTEM, Supplemental Courseware + Electives, Pricing varies

The American Education Corporation A+nyWhere Learning System + Electives, is an e-learning courseware program that provides research-based curriculum content for grades K12 and adult learners in reading, language arts, process writing, mathematics, science, social studies and Spanish. The system's objective-based, problem-solving courseware consists of over 5,200 lessons and over 200,000 pages of content. In addition, the courseware's curriculum, integrated assessment, and automated reporting tools are aligned, where applicable, to all national and state academic standards. www.amered.com
